Fort St. John Enerplex Long Track Speed Skating

Fort St. John is located in NE British Columbia and has daily air service to Edmonton, Calgary and Vancouver.

On Dec 23, 2009 members of the Fort S. John Elks Speed Skating Club were the first to put their blades on the ice in Canada's newest 400 meter indoor speed skating oval.

The facility is located at the site of the original outdoor oval, where many of Canada's Olympians have competed in the past. The facility is located at an elevation of about 700 meters above sea level.

Due to conversion of the Richmond Oval after the 2010 Olympics to an indoor sports facility, the Fort St. John Enerplex became Canada's second indoor speed skating oval. The first major competition held was the WorkSafe BC Provincial Long track Championships on January 23 and 24, 2010.

The official opening of the Enerplex, which also houses 2 NHL size rinks and a 380 meter running/walking track took place in the fall of 2010.
